## PROFESSIONAL EXPERIENCE

---

### Lurik Labs

Queens, NY

Web Developer Intern

October 2019 - February 2020

- Create functional React components of Figma files from the graphic designs team
- Improve SEO and user accessibility with the use of Meta Tags and mobile responsiveness

## TECHNICAL PROJECTS

---

### Guess Who Infinite - [Demo](#) | [GitHub](#) – **React** | **Node** | **Express** | **MongoDB** | **Socket.io**

A game of Guess who where players can choose their own category and play on different browsers

- Implemented Socket.io to allow users to communicate through different browsers and create a room
- Scraped data from google images to be used as cards when player select their category

### Shop Equal - [Demo](#) | [GitHub](#) – **React** | **Ruby on Rails**

A centralized interface designed to empower the Black community by directing users to Black owned businesses

- Created an open source end point for developers to use and community to update by sending requests to the admin to verify and add to the database
- Implemented a search bar that allows users to filter by categories and location for black owned businesses

### COVID-19 Visualizer - [Demo](#) - [GitHub](#) - **React**

View data and dangers of COVID-19 throughout United States

- Incorporated a svg map of the USA that allows users to view data on the state that was clicked
- Implemented tables, charts, graphs, and timelines for visual tracking of the spread of COVID-19

### Name Rater - [GitHub](#) - **MongoDB** | **Express** | **React** | **Node**

View how your name ranks amongst others

- Used MERN stack to create a database of first names from the Social Security Administration
- Incorporated React Hooks to easily manipulate state without creating class components

### Hangry - [Demo](#) | [GitHub](#) - **React** | **Ruby on Rails**

See what recipes you can make and what your friends are craving

- Implemented JWT for authentication and persisted login data through the Redux store
- Fetched from an external API for keywords used in recipes, responses can save by making a POST request to Rails

### OhSnap - [GitHub](#) | [Demo](#) - **Ruby on Rails**

Social media for photographers to upload their work and gain inspiration

- Used active storage for users to upload images files and have it saved to a model for other users to view
- Created follow feature by aliasing associations to join the user table to itself to create a follow table
